

What should government do ?

~~get the people~~
to maintain people's healthy lifestyle.

→ Indent + (-0.5)

I think that government should give people concern for diet more than now.

The present time, The convenience store appeared so that we can buy food to we

, and

and whatever we want

want to eat. ~~And~~ The Junk food appeared too. Junk food is higher than old food. It show

that the present Japan's society is easy to grow fat. Please do not start the sentence with ~~And~~. Also people enjoy junk food, such as hamburger in McDonald's. Junk food has much calories

Recently Interest of food is rising. ~~But~~ I thing that it is not enough level of

diet. Government should do more strong impact policy. I suggest following description.

~~From now~~, Society will be ubiquitous any time, anywhere and whoever. It is useful to

calory control. So, Network relate to diet. And what we ate is calculating. All calory is counted

and it's data is sent to network. Later, Home is sent total data.

We can see total calory. It urge calory control to us.

These idea doesn't necessarily succeed.

~~But~~ seriously considered idea like this should be collected to government. If us did it, diet

may improve

First

Control calories

these data should be sent to individuals

us to control our calories

(?)

(?)

more than other healthy food.

people are getting interested in food they consume. However I think that that is not enough for people to maintain their healthier lifestyle.

would like to suggest following things
